## »» Geothermal Energy – Key features

Source: ESMAP 2012

### What are the benefits ?

- A proven technology
- A stable source of base-load power
- Very low CO2 emissions
- Relatively low levelized cost of electricity EUR 0,05-0,10/kWh

### What are the challenges?

- Plant size limited by available resource
- Relatively high investment cost of EUR 3-4 Mio./MW
- Considerable Exploratory Risk acts as a serious impediment

# »» Geothermal Energy – How does it work?

Electricity generation from geothermal resources

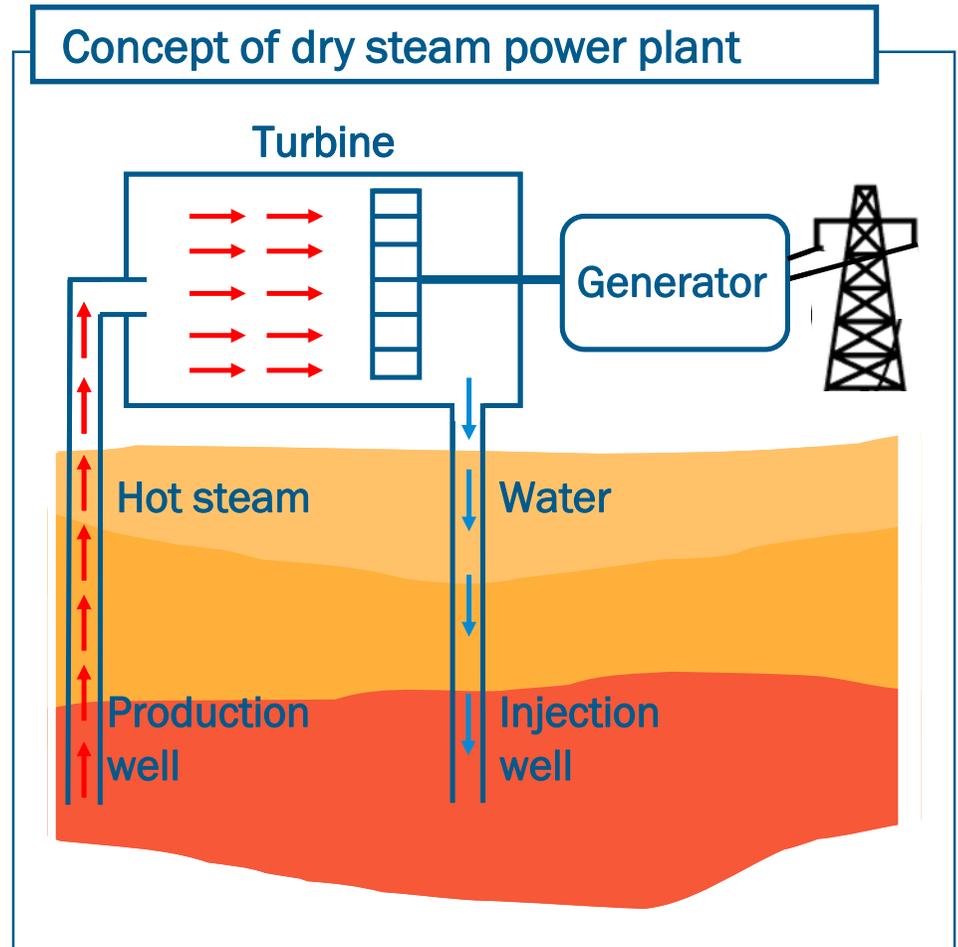

## Electricity generation

- All geothermal power plants use steam to turn large turbines, which run electrical generators
- Different technologies are used for different environmental conditions (e.g. heat of the water, availability of steam and water)

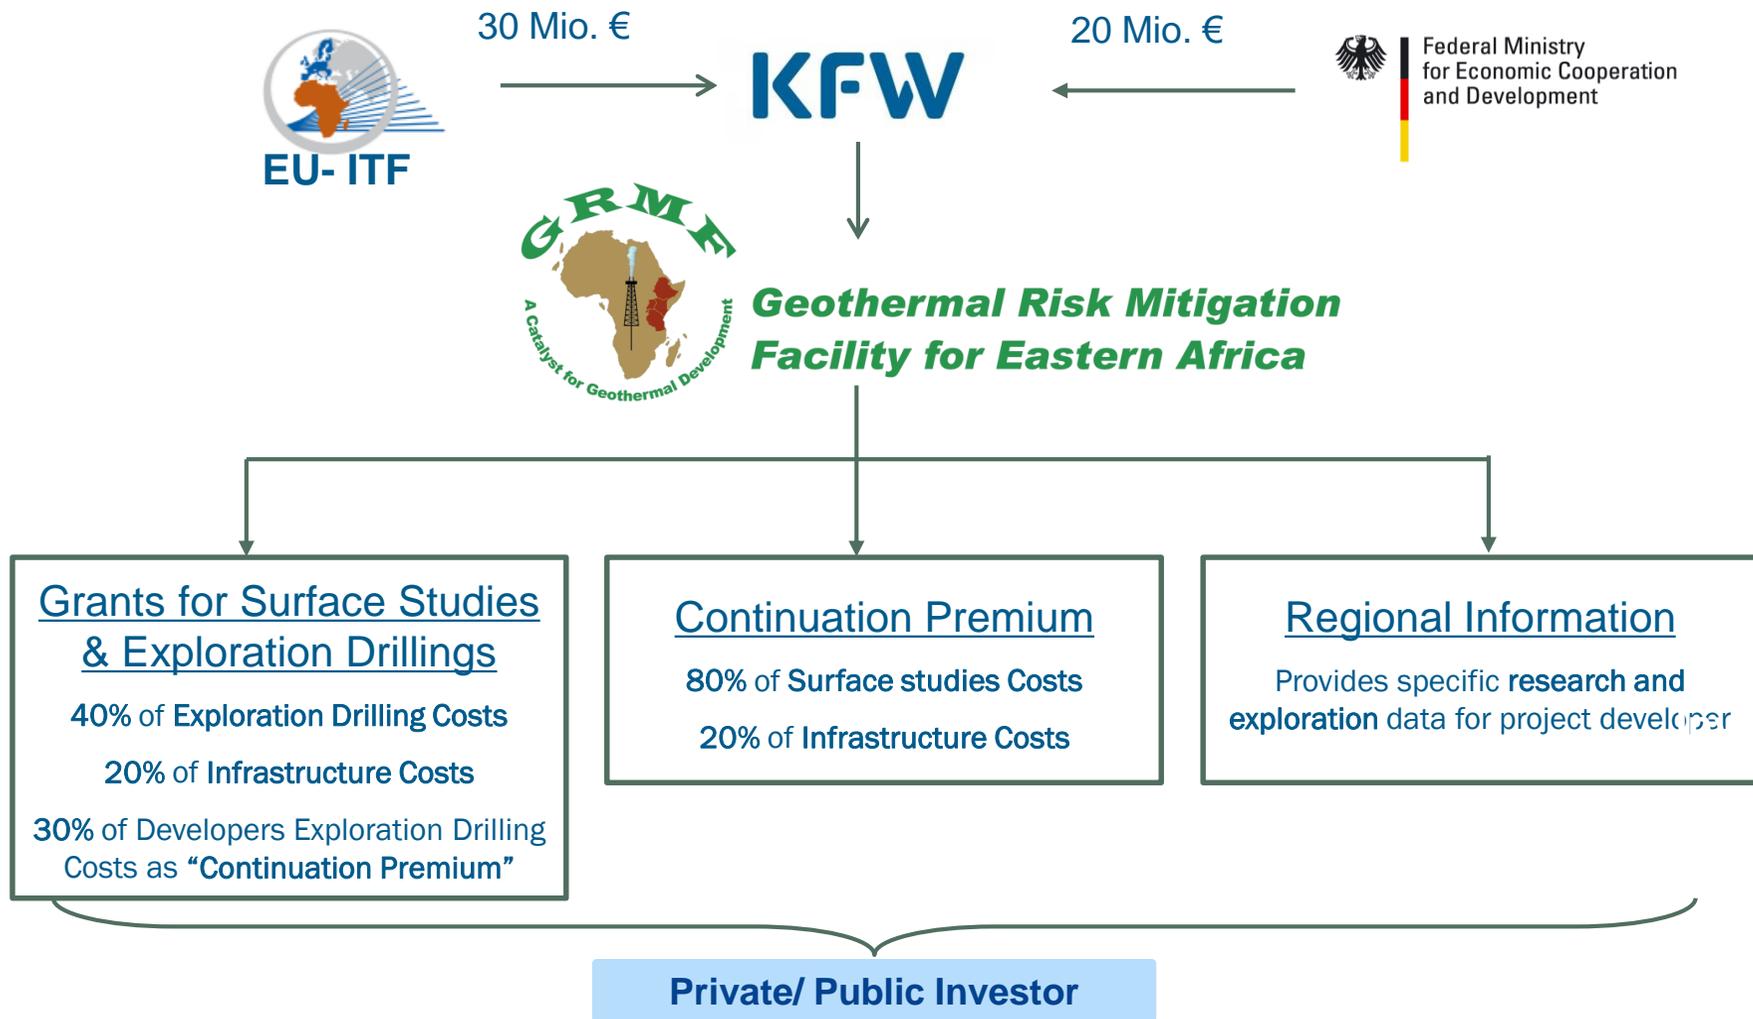

Source: KfW 2013

## Concept of dry steam power plant

# »» Geothermal Risk Mitigation Facility East Africa

# »» Geothermal Risk Mitigation Facility East Africa – Status Quo

Successful first application round in 2012/2013

---

## Expression of Interest

---

- 11 expressions of interest
- More than 50 % of applications for drilling projects
- Public, private & public private partnerships
- Institutions and companies from East Africa & int. companies

---

## Application

---

- Out of 8 shortlisted projects 7 applications were submitted
- 6 drilling projects and 1 surface study
- 5 projects are invited to sign a Grant Agreement

---

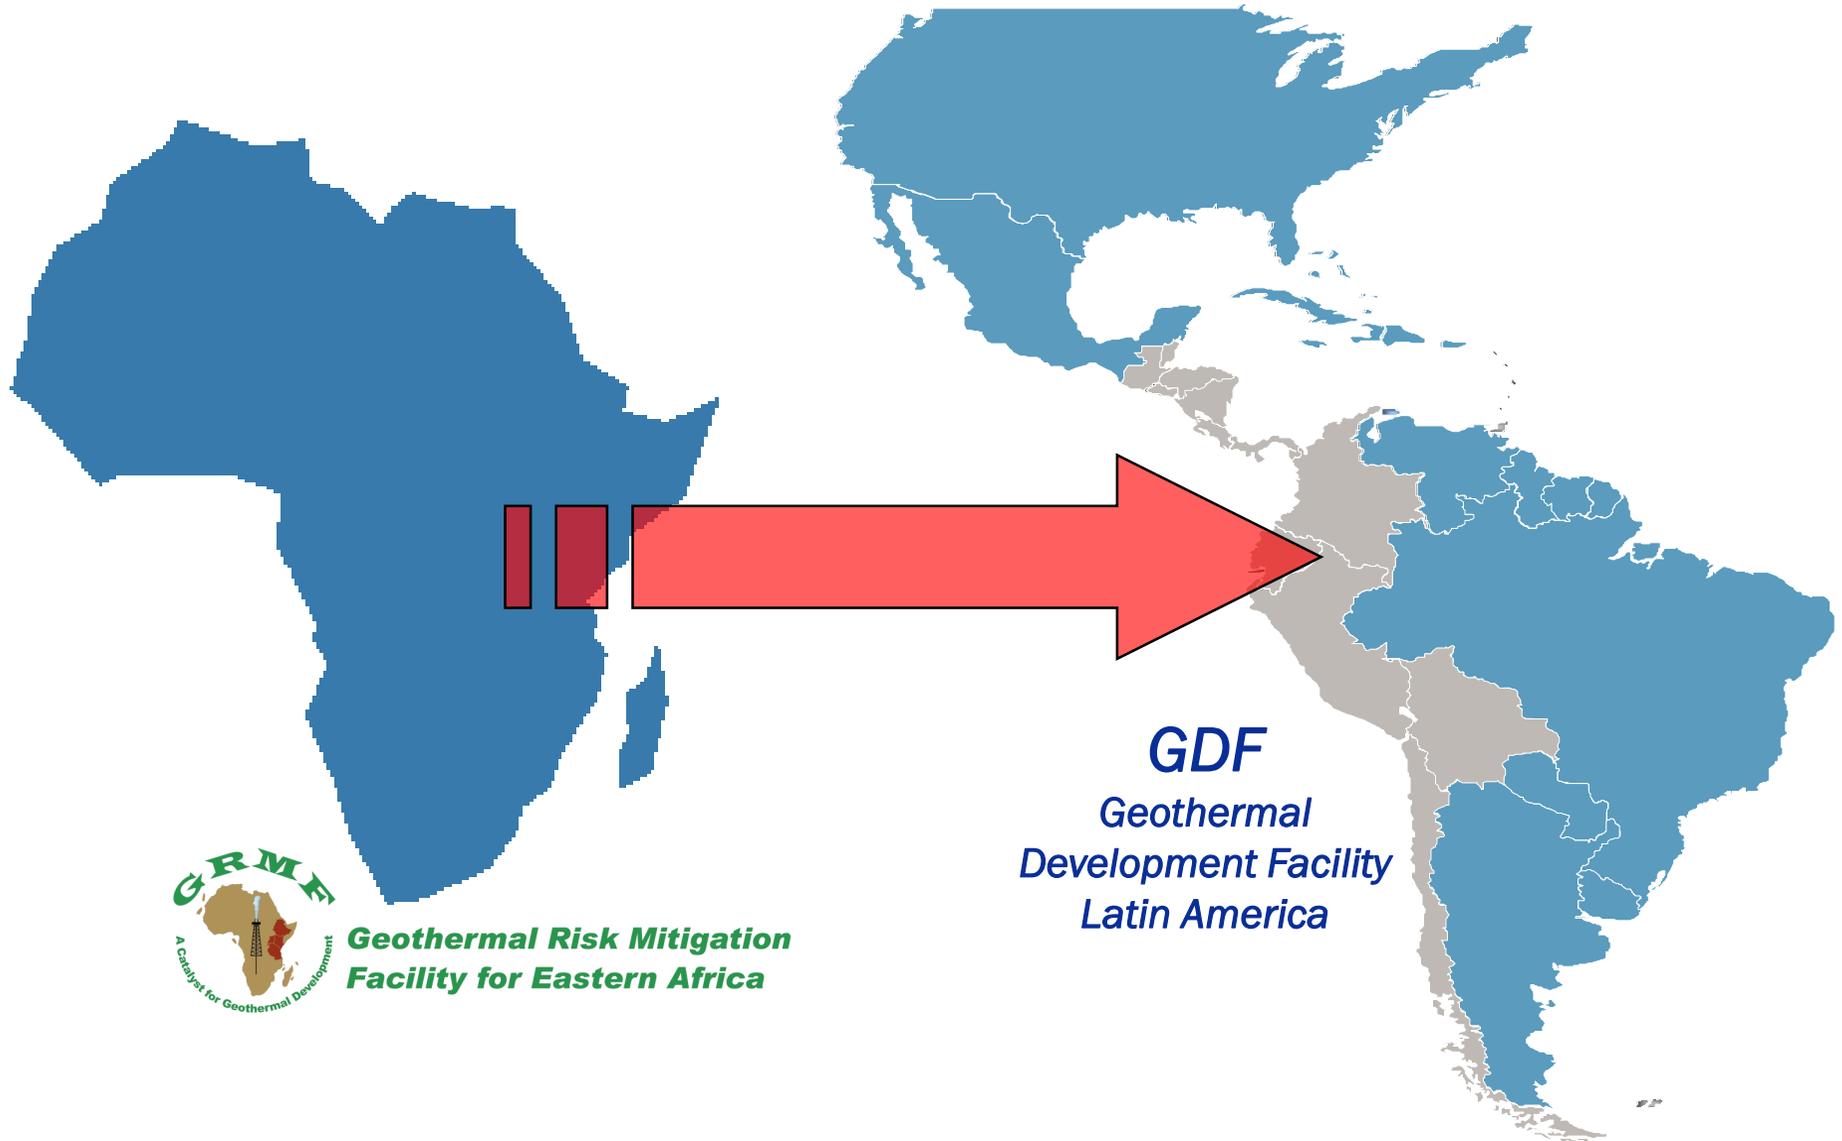

## Outlook

---

- Extension to 11 countries:
  - Burundi, Comoros, Djibouti, DRC, Eritrea & Zambia
- Additional funds required for rounds 2 – 4
- Other donors interested to join

**→ This shows, that GRMF is the right instrument at the right time!**

»» If we have a successful approach - why not replicate it ?

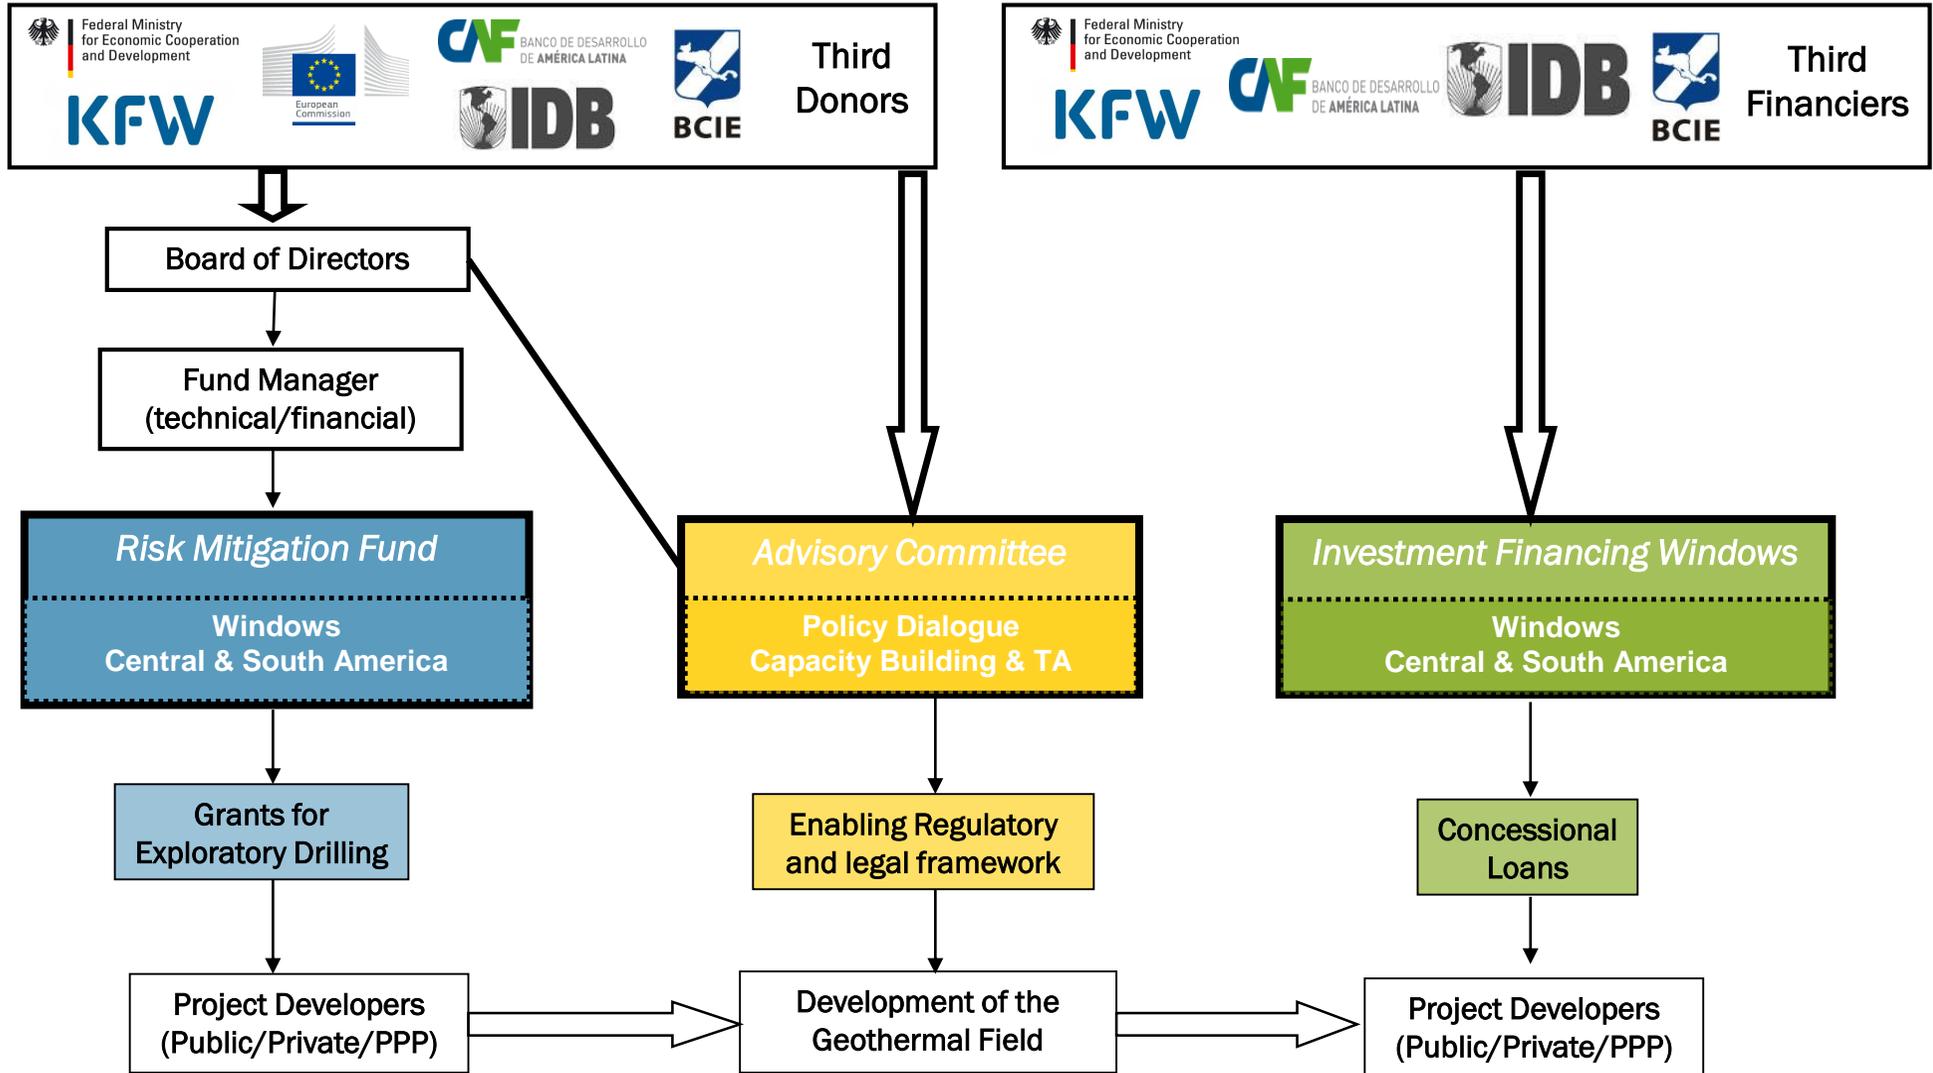

## »» Latin America might be the right place at the right time...

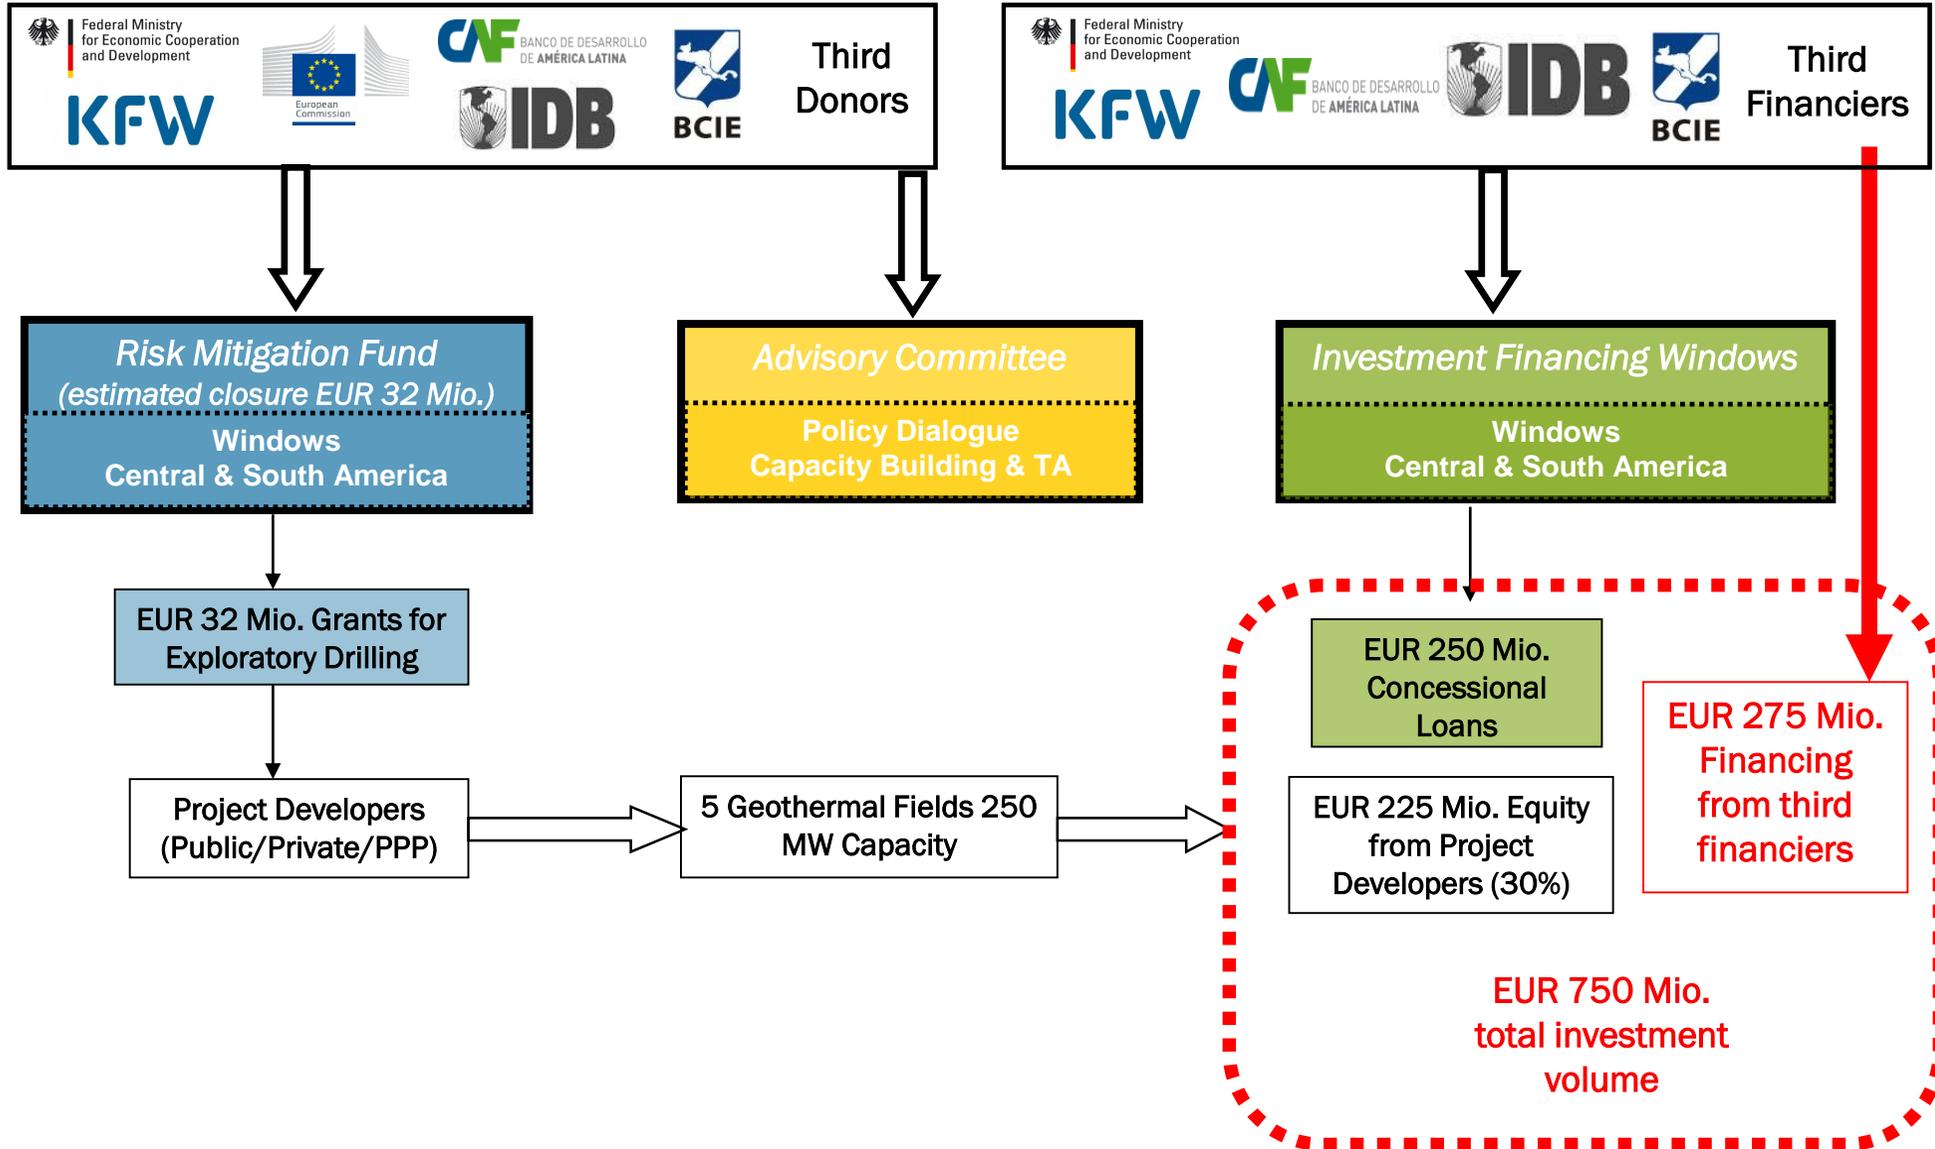

Source: IGA, 2011

- › Strong interest from governments, utilities and project developers
- › Considerable Geothermal Potential
  - › Central America:
    - Considerable amount of geothermal capacity installed and considerable pipeline of projects, however sector stalled due to lack of risk mitigation mechanisms and suitable financing.*
  - › Andean Region:
    - Considerable pipeline of projects in advanced stages of development, however due to lack of risk mitigation mechanism and financing not a single commercial plant under operation so far.*
- › Political Window of Opportunity:
  - › Joint Initiative by IRENA, OLADE and the International Geothermal Association (IGA), to promote Geothermal Energy in South America

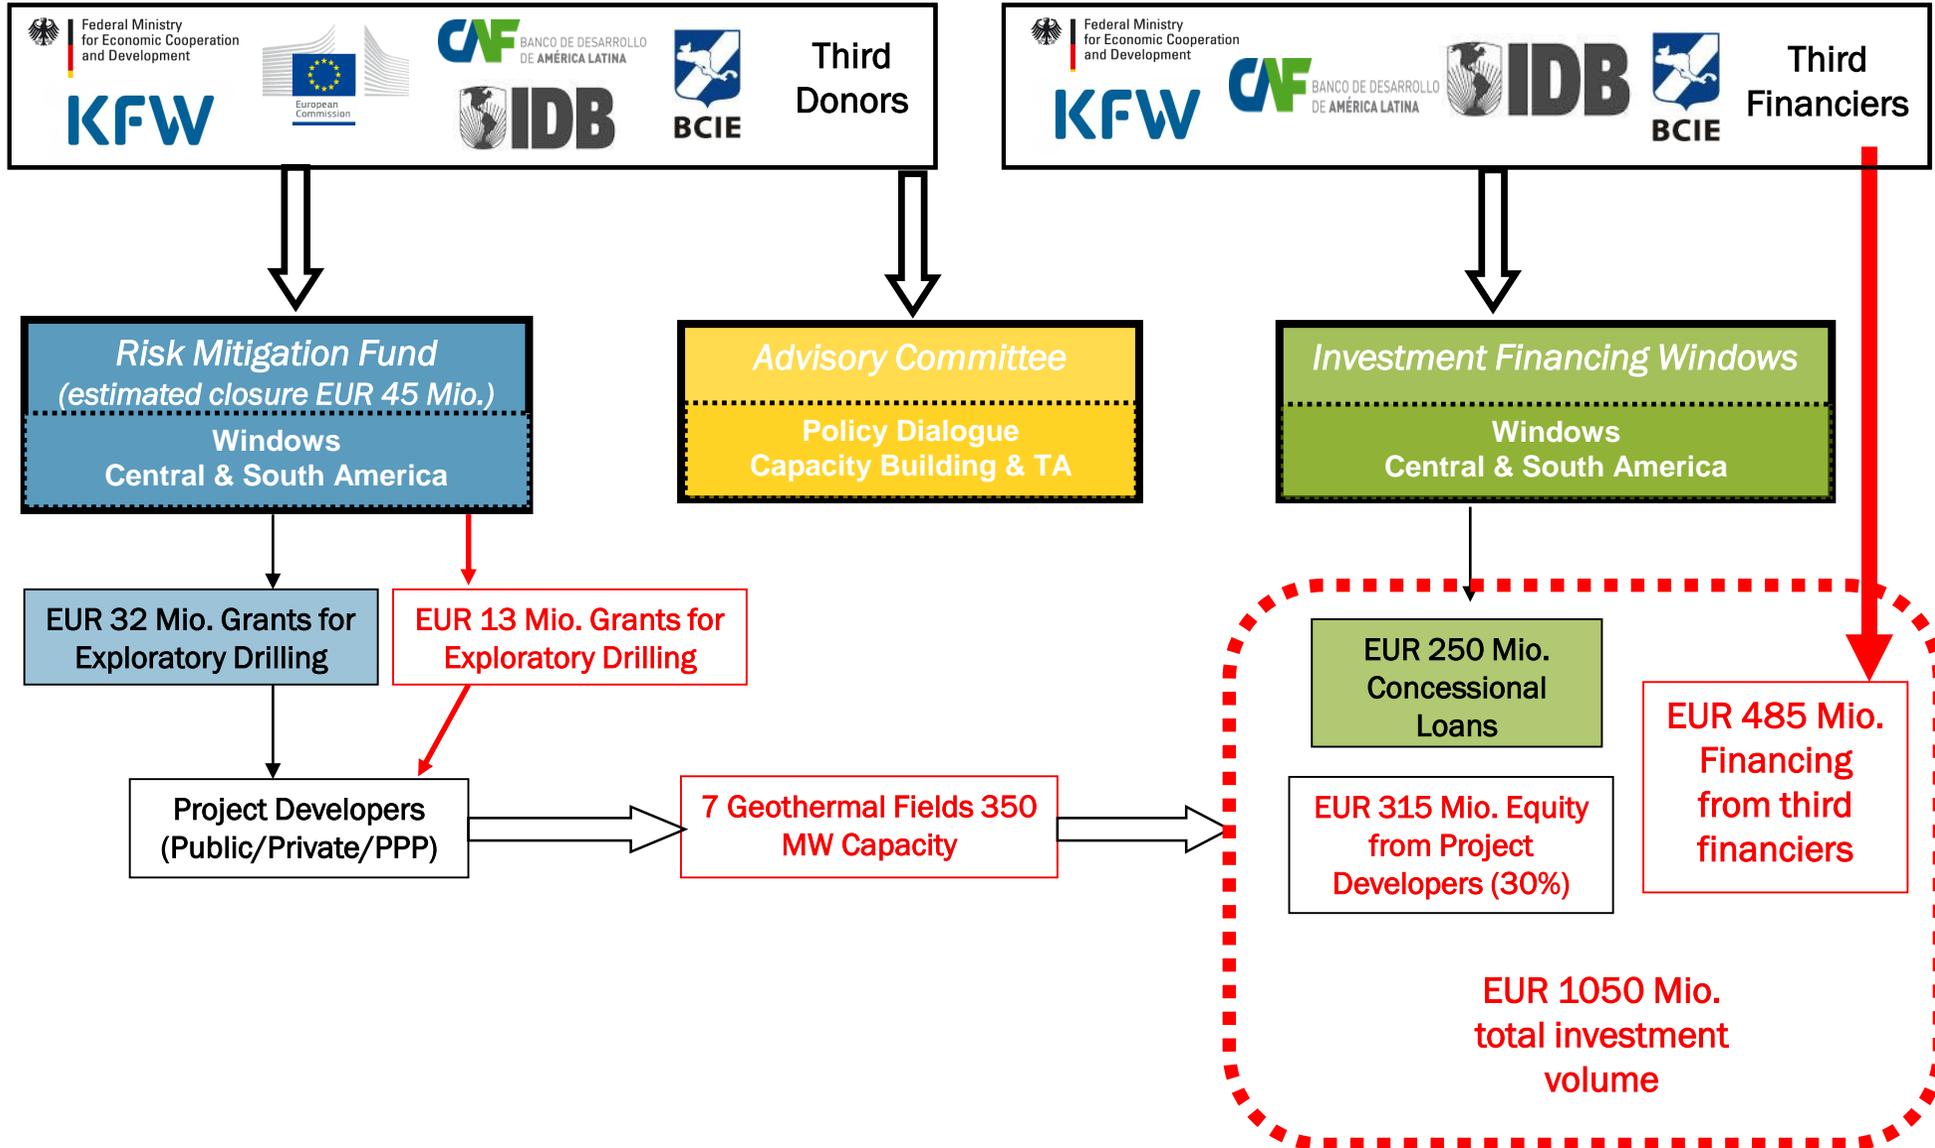

# »» Geothermal Development Facility – Potential Design

## »» Geothermal Development Facility - Timeline

- Design as well as feasibility studies for Central & South America by Q1 2014
- Securing political approval and applying for funding for the facility:
  - FZ-R grant funds of up to EUR 15 Mio. from BMZ
  - EU-LAIF grant funds of up to EUR 20 Mio. from the European Commission
- Due Dilligence in Q2 2014
- Tender for the Fund Manager by Q1 2015
- Launch of the Fund by Q4 2015
- 1st application round in Q1 2016
- First grant agreements signed in Q3 2016
- First loan agreements signed in Q4 2017
- ...

## »» Geothermal Development Facility - Summary

- › Replicate a proven approach for market development
- › Develop a clean, cheap, proven and base-load technology
- › Leverage substantial investment flows
- › Generate considerable CO2 emission savings  
(~ 587.000tCO2e/yr )

»» Thank you for your attention!
